March 4, 2003

To Whom This May Concern:

I have been treating this 42 year old female who came to me shortly after being diagnosed with Hepatitis B & C. The patient consulted with me because she did not want to use Interferon or Ribavirin because of her concern with side effects.

Her initial lab studies (8/30/02) prior to starting Silver 100 Ionic Silver Complex were:

HEPATITIS C VIRAL RNA, QUANTITATIVE Bdna (8/30/02) – MEASURING VIRAL COUNTS

HCV RNA, QUANT, BDNA	1788000 H	IU/ML	REF RANGE: <615
HCV RNA, QUAN, BDNA	9298000 H	COPIES/ML	REF RANGE <3200

HEPATIC FUNCTION PANEL (8/16/02) – MEASURING LIVER ENZYMES

AST*	41 H	U/L	REF RANGE: 2 – 35
ALT*	65 H	U/L	REF RANGE: 2 – 40

Her follow-up studies were done 3 months after starting Silver 100 Ionic Silver Complex:

HEPATITIS C VIRAL RNA, QUANTITATIVE (12/05/02) – MEASURING VIRAL COUNTS

HCV RNA, QUANT, BDNA	2050 H	IU/ML	REF RANGE: <50
HCV RNA, QUAN, BDNA	5535 H	COPIES/ML	REF RANGE <135

HEPATIC FUNCTION PANEL (12/05/02) – MEASURING LIVER ENZYMES

AST*	20 H	U/L	REF RANGE: 2 – 50
ALT*	20 H	U/L	REF RANGE: 2 – 60

The patient received no other treatment than Silver 100 Ionic Silver Complex 14 sprays orally three times daily & experienced no side effects.

*Note that the liver enzyme tests are the most common and reliable markers for viral activity and liver damage and that the post treatment liver enzymes were both within normal limits indicating that no further liver damage is occurring and that the treatment is dramatically successful.

Sincerely,

Herbert R. Slavin, M.D.
